Project #1
Development System Installation

1. Documentation throughout: Keep detailed notes on choices made for each step of the following 4 tasks. Store notes in text files named for each task for now.
2. Install Ubuntu 6.06 LTS Server (Lamp Installation). Use your team name for the base account userid.
3. Use aptitude to install openssh-server
4. Use adduser to create user accounts for team members and instructor. Disable the team base account for login.
5. Use HOWTO on howtoforums.net to install request-tracker 3.4 on Ubuntu 6.06 LTS. Use aptitude instead of apt-get throughout.
6. Store documentation files in /home/teamname/docs
7. Due 9/11/07.
