In this project, we will get experience writing and evaluating policies and procedures for a computing service organization. In this case, the organization is our own NetSAL Computing Services organization. For this project, each team will write ethical policies. This should include an Acceptable Use Agreement to which we can ask our customers to agree, as well as a Privileged-Access Code of Conduct for our system administrators. Follow the guidelines in PSNA chapter 12. You may want to research the Acceptable Use Agreement (or equivalent) at Southeastern, and use it as source material for ours, but they deal with different populations, so they should be different!

These documents are due at the beginning of class on Thursday, 10/02/08. We will then have groups exchange materials, and each group will evaluate another group’s policies. A short written criticism/evaluation will be due from each group at the beginning of class on Thursday, 10/07/08.

All documents should be prepared in MS Word. For now, the group leader should send the group’s documents to Dr. Kammerdiener as an attachment to an email whose subject line is “Project 2 Submission”.
